Nosepad-free sports sunglasses

AirFly

Beyond the Limit

produced by

ZYGOSPEC

SABAE,JAPAN

Trail-only model adapted to various conditions

New developed lens for Trail running

Ensure visibility in various situations

Pink color lens is adopted for this Trail running model. Visible light transmittance of the lens is 50% and it's very easy to use under extreme conditions.

Anti-fog coated lens

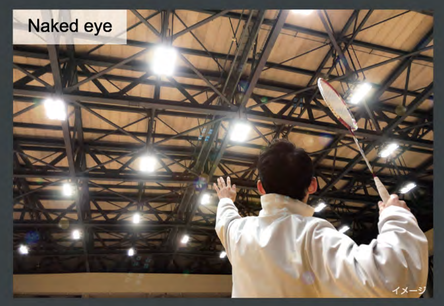
Anti-fog lens helps trail runners,generally run longer distance than a full marathon, a lot. In trail running where the road condition such as cliffs, gravel, grasslands, and mud are not constant, ensuring visibility is essential.

Wide-view lens

In trail running, a wide field of vision is also an important factor. Therefore, the lens of AF-301TR is set to be the same size as BK series. You can see everything from top to bottom, and left to right.

Reduce the brightness of the lighting and create an easy-to-see view !

Experience the surprising Lightness and Comfortable Fit of Our Innovative Frames !



照明まわりの広がった光が抑えられ、シャトルなどの目標物を見失いません

Reduce the brightness of the lighting

Upgrade Your View

The blue light blocking lens cuts blue light, which is said to be the cause of glare, by 50% to create an easy-to-see view. This model has a very large lens area, providing a wide field of view that can keep up with moving targets.

Feel very light cause it's supported by the cheekbones

Comfortable Fit

Rather than being supported by a small nose bridge, these sunglasses are supported by the cheekbone area of the skull, which provides support for the entire head. By minimizing support by the nose bridge, this model can be worn lightly, comfortably, and without much burden.

No burden on your nose

Feel like you're wearing nothing at all

There is no burden on the nose, and the soft side pads provide a comfortable fit that you'll forget you're wearing. These are gentle enough to wear for a long time.

Nose guard US $10.00

Color : Black & White

This is a guard that prevents the lenses from directly touching your nose. This is available for any lenses other than AF-301ID.

Sweat guard (2 pcs) US $10.00

Color : Black

This is a pad that stops sweat from running down the back of the lens. It comes with adhesive tape on the back and is used by sticking it to the upper back of the lens.

For e-sports

AF-801

Blue Light Blocking Lens version

for e-SPORTS - New Amaging Eyewear

AF-801 is developed for e-SPORTS players and combines a lightweight feeling when worn and a comfortable fit. It dosen't have nose pads, so you can experience the merit of a wider in the conventional nose pad area, to the extent that you may realize, "The nose pads have blocked my view so far."
The weight is lighter than that of AF-301ES (Sports sunglasses for e-SPORTS), and this model also has the same side-pads as sports sunglasses such as AF-301. Therefore, it shows you a highly resistance to slipping even if you wear AF-801 so long time. Also, it is possible to use as prescription glasses by changing lenses to prescription ones.

Blue Light Blocking Lens

The blue light blocking lens of AF-801 which is developed for e-SPORTS players cuts blue light by 30% and reduces the brightness of the monitor. This is the most suitable for e-SPORTS players that invoice continuously looking at the monitor for a long time. Compared to AF-301ES - sports sunglasses for e-SPORTS -, the view is less distortion because of it's lens' shape. Especially we would recommend AF-801 to those who are not used to High curve lens' view.

Wide View without nose-pads and Good Fit

AF-801 is developed for e-SPORTS players. As for AF-801 with Demo Lens version, you need to make your own prescription lens before using it. Please ask AirFly dealers for prescription lens. If you don't need any prescription lens. AF-801 with Blue Light Blocking Lens is recommended.
Compared to AF-301ES - sports sunglasses for e-SPORTS, its weight is lighter and its view is less distortion because of its lens' shape. Especially we would recommend AF-801 to those who are not used to High curve lens' view.

for e-sports

e-SPORTS AF-301ES/AF-901ES

BLUE LIGHT CUT

By cutting the blue light emitted from the monitor, you can work on tasks requiring prolonged concentration. ES30 cuts blue light by 30%. With almost coloress and transparent lenses, you can see the colors on the monitor almost as they are, and that contributes to reducing eye fatigue, ES50 significantly cuts blue light by 50%. The lens has a slightly yellowish tint, but it provides a high level of blue light blocking and contributes to reducing eye fatigue during extended use.
Of course, no nose pads, which is the bigest feature of AirFly, brings “Comfort, as nothing touches the nose” and “Clear View” to users. If you are experiencing discomfort or pain from nose pads, we highly recommend this product. As there are no nose pads, there is no worry of nose pads slipping or glasses failling due to sweat. It provides an enviroment for focusing on e-Sports.

e-SPORTS

AF-301WV has a wide size polarized lens. It cuts off the extra reflected light that jumps into your eyes and give you a clear view. For example, it reduces glare on the surface of the water when fishing and cuts off the reflected light from the surface of the lawn when playing golf. In addition, the wide size of the lens makes it ideal for sports such as tennis and baseball.
The inner surface is coated with an anti-reflection coating to prevent from reflection from the back. Although UV rays can be harmful to the eyes, the lens cutting over 99% of UV rays protects your precious eyes.

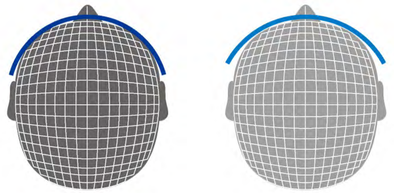
AF-305

2021 NEW MODEL

This new model has a removable front bar that acts as a sweat proof and accents the design. Since this model uses a 7-curve lens, it achives a wider field of view that covers the eyes than AF-301 and reduces wind entrainment. In addition, because a new material is used for the frame, we have achieved the best comfort in the history of AirFly.



Equipped with a 7-curve

Compared to the conventional 6-curve lens, a 7-curve lens with a shape that is more in line with the face is adopted.

New material

By adopting a new material, it is even more comfortable to wear than before.

Detachable top-bar

It can be used as a rimless type by removing the top-bar.
